Work breakdown

- Total workload: 1 shared pipeline, 2 text models, 4 sets of experiments, 1 labeling scheme, 1 system prototype. The implementation must use Gensim and NLTK

1. complete Task 1 to establish a working pipeline
2. replace the model to complete Task 2
3. reuse the evaluation functions for Task 3
4. complete the written components of Tasks 4
5. Task 5

the final ZIP file should include:

- the source code
- a discussion document, experimental results
- the low-fidelity prototype for Task 5

Suggested Division of Work

Task 1～4	**Person A**	**Person B**	**deadline**
Repository Structure & Environment Setup	Primary responsibility	Verify setup according to the instructions	25.10 before 12:00 pm
Data Preprocessing & Two Models	Primary responsibility	Review and test	25.10 before 12:00 pm
Evaluation Functions	Primary responsibility	Review and test	25.10 before 12:00 pm
Tasks 1 & 2	Implementation, preliminary experiments, and report writing	Reproduce results and prepare for Task 3	25.10 before 12:00 pm
Task 3	Review and test	Run experiments, conduct case analysis, and write the report	25.10 before 17:00
Task 4	Evaluate the solution and write the report	Design the solution and implement the code	25.10 before 21:00

Final Report	Joint review	Joint review	25.10 before 22:00

Task 5	Person A	Person B	deadline
Recommendation Mechanism & User Model			
User Flow & Interaction Design			
Low-Fidelity Prototype & Design Rationale			

Collaboration Workflow

- google docs/words for report
- figma for A5？
- GitHub for collaboration and version control, The proposed repository structure is as follows:

```
project/
├── data/                  # Dataset: both members use the same version
├── preprocessing.py       #  Data loading and preprocessing
├── evaluation.py          # Shared evaluation functions
├── tfidf_experiment.py    # TF-IDF experiments
├── lda_experiment.py      #  LDA experiments
├── results/               # Experimental metrics and error analysis examples
├── report/                # Reports and prototypes
├── requirements.txt       # Shared dependency versions
└── README.md              # Installation, execution instructions, and experimental setup
```
